Our Mission

- To support our customers by providing superior products and services of exceptional value that help them gain competitive advantage in their markets.
- To sustain our vision and mission by constantly seeking renewal via continuous research and development as well as learning, and the application of new technologies and best business practices.
- To provide a pleasant, nurturing and growth oriented environment which encourages our employees to be highly productive and to grow personally and professionally.
- To develop diversified markets that provide stability and adequate financial returns that allow us to achieve our vision and to provide ongoing opportunity for Sanwa employees.

A large white bag is filled with a dense mass of dark, tangled metal wires. The wires are thin and appear to be made of a dark metal, possibly steel or iron. They are coiled and intertwined, creating a complex, chaotic pattern. The bag is made of a white, slightly wrinkled material, and the wires are visible through the opening. The lighting is bright, highlighting the texture of the wires and the folds of the bag.

Our Vision

Sanwa's vision is to be known as the industry leader in rubber manufacturing through setting industry standards for excellence in service and the highest quality and most reliable products available in the marketplace. We will provide our customers with manufacturing expertise, quality control standards, and detailed technical support. We will constantly be tuned to our customers needs through our flexibility, innovation and commitment to outstanding overall customer service.

Our Value

At Sanwa, we do not only sell products, we provide solutions, service, innovation and market trend information in today's ever changing and fast paced market. Our technical support staff is available to offer professional suggestions and the highest level of technical knowledge to meet your individual requirements and of course provide a value solution to meet the most complex budget. Our sales staff understand the meaning of "the customer comes first". Our ability to cater to each customer, know our customers by name and challenge ourselves to become a better company each and every day is the cornerstone of Sanwa's value to you.

Our team

We are proud of the fact, that at Sanwa, we hold our standards high. All of our employees act with the highest integrity, and our goal is to provide our customers with the best solutions and products available. Our continuous innovation, forward-thinking mind-set, and care for our customers' success, allow us to continue to be the leader in our industry. Our detailed and personal attention to your precise needs sets us apart from our competitors. Our team is comprised of qualified professionals with diverse backgrounds in the areas of engineering, sales and marketing, administration, accounting and operation management. We have a wealth of experience acquired through working on some of the largest and most complex brands and projects in our field.

We have also built a robust infrastructure to support our professionals including in-house tooling, quality control, printing, customer relations, as well as a strong technical support and operations team.

Tooling department

Our in-house experienced tooling department personnel use their decades of combined experience to ensure the most precise tooling results available, we strive to meet your quality demands as well as those of your customers.

Quality Control

Sanwa is committed to quality at every stage of the production process from research and development to customer support, this commitment has been recognized through official accreditation to both national and international standards including ISO.

Accreditation to international standards ensures confidence in the quality and consistency of the products and services provided by Sanwa and demonstrates compliance to internationally agreed standards and most importantly to 100% customer satisfaction. To do that, we have three different quality control departments to make sure your products are to be tested from raw material to process stage and to end products before delivering the finest quality products to you.
